DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims drawn to 1-10,13-15,26-28 and 30-37, are drawn to “a substrate holder” classified in class/subclass 361/717-719.
 - II. Claims 11, 12, 38, and 39, are drawn to “a substrate processing system”, classified in class/subclass 165, 361/689.
 - III. Claims 16-21 and 29, are drawn to “method of manufacturing”, classified in class 29.
 - IV. Claims 22-25, are drawn to “method of controlling a temperature”, classified in class 165.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Groups I and II are related as subcombination and combination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed (substrate processing system) does not require the particulars of the subcombination (substrate holder) as claimed, at least in part, because the combination does

not require for “a thermal conductivity between the heating component and the cooling component” to be “increased when the contact volume is provided with a fluid” (claim 1), or “first means for effectively reducing a thermal mass” (claim 13). The subcombination has separate utility such as a substrate holder.

3. Inventions of Groups III and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product (substrate holder) may be made by another and materially different process, at least in part, because steps of “polishing” or “roughening” of the internal surfaces of the contact volume may be avoided by providing said surfaces with the predetermined desired roughness values at the time of the forming of said contact volume.

4. Inventions of Groups I, II and IV, are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another materially different product, at least in part, because the process may utilize a substrate holder which uses as a fluid not a “gas” as claimed, but other types of fluids, for example liquids (water, alcohol, etc.).

5. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and would require different searches, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
